VOTERS LOCKING IN AS CAMPAIGN APPROACHES CONCLUSION

[Ottawa – April 28, 2011] – Following a frantic flurry of changes, the Canadian electorate appears to have paused to consider where they have arrived in as Campaign 41 winds its way to a shocking conclusion. The Conservatives are strongly ensconced with 34.8 points with a dramatically strengthened NDP in second at 27.5. The Liberals continue to plumb historical depths as they slide to 22.3. The Green Party is significantly reduced from their status entering the final days of the 2008 campaign and the Bloc Quebecois is in danger of sliding to political oblivion in Quebec in what is arguably the most shocking story of this campaign.

Looking at those most certain to vote, the Conservatives extend their advantage by a full point to 35.7 while the NDP, the Liberals, and the Bloc would hold the same proportions as they hold among all eligible voters. The Green Party would lose another point of support. The NDP and the Liberal Party are the only parties with much opportunity for further growth and the NDP shows a modestly higher propensity to change their vote.

It is also interesting to note that nearly ten per cent of women voters remain undecided (twice the rate for men). If the Liberals have any hopes of cushioning what is becoming a disastrous campaign, they will desperately need to convert some of those undecided women, NDP supporters, and recent losses to the Conservatives back to their fold. As for a massive NDP collapse, that likely isn't going to happen. Jack Layton's orange train has left the station and it's just a question of how far it will take him. With a very slight uptick, he could see himself arriving at not only Stornoway, but even Sussex if the new government were to be defeated promptly. Heady stuff for a party that entered the race at a mere 14 points.

In the next few days, we will see if Canadian voters have any further surprises in store for what must be shell shocked politicians. It seems that final movements in vote rich Ontario will provide the answer as to what colour – or colours – the next government of Canada will be.

HIGHLIGHTS

- **National federal vote intention:**
 - ☒ 34.8% CPC
 - ☒ 27.5% NDP
 - ☒ 22.3% LPC
 - ☒ 6.8% Green
 - ☒ 6.1% BQ
 - ☒ 2.5% other
- **National federal vote intention (committed voters only):**
 - ☒ 35.7% CPC
 - ☒ 28.0% NDP
 - ☒ 22.5% LPC
 - ☒ 5.9% Green
 - ☒ 5.9% BQ
 - ☒ 2.0% other
- **Direction of country:**
 - ☒ 48.6% right direction
 - ☒ 41.8% wrong direction
 - ☒ 9.6% DK/NR
- **Direction of government:**
 - ☒ 43.9% right direction
 - ☒ 47.7% wrong direction
 - ☒ 8.4% DK/NR

Commitment Index:

In a period of unprecedented political ambivalence, commitment is a scarce resource. In a race such as this, one of the key determinants of electoral success is the overall degree of loyalty or commitment of voters to various alternatives.

We have therefore created a “commitment index” which we will associate with each of the parties’ weekly results. This index is an aggregation of six factors:

- the ease with which a respondent revealed/declared their voting preference;
- the self-rated level of enthusiasm with current voting choice;
- the expressed intensity of attachment to current voting choice;
- the self-expressed likelihood of actually voting on May 2nd;
- the concordance between current choice and declared past vote; and
- the respondent’s willingness to consider other parties.

This index will be useful in our analysis of the outcome of the election given that, all other things being equal, the more committed one’s supporters, the greater the likelihood of winning.

While there is no universally-accepted method as to how a commitment index should be calculated, we believe that our technique offers valuable insights into Canadians’ commitment to their voting choices. Nevertheless, we will be experimenting with new commitment measures over the coming weeks.

Calculation of Commitment Index

Respondents are assigned points based on their responses to six questions. A respondent's score is simply the total number of points they receive. A respondent may receive up to nine points. Points are assigned as follows:

If a federal election were held tomorrow, which party would you vote for?

- If the respondent selects their voting choice without being asked whether they are leaning towards a particular party, they receive 1 point.

How enthusiastic are you about your current choice?

- If the respondent says that they are very enthusiastic about their current choice (5, 6, or 7 on a 7-point scale), they receive 1 point.
- If the respondent says that they are extremely enthusiastic about their current choice (7 on a 7-point scale), they receive an additional point.

How likely it is that you will change your mind between now and the next federal election?

- If the respondent says that it is not likely that they will change their mind (1, 2, or 3 on a 7-point scale), they receive 1 point.
- If the respondent says that it is not at all likely that they will change their mind (1 on a 7-point scale), they receive an additional point.

How certain are you to vote in the next federal election?

- If the respondent says they are "quite" certain to vote in the next election, they receive 1 point.
- If the respondent says they are "absolutely" certain to vote in the next election, they receive 2 points.

How did you vote in the last federal election held in 2008?

- If the respondent intends to vote for the same party as they did in 2008, they receive 1 point.

Talking again in terms of a federal election, which party would be your second choice?

- If the respondent does not select another party as a second choice, they receive 1 point.

Methodology:

EKOS' weekly tracking polls are conducted using Interactive Voice Response (IVR) technology, which allows respondents to enter their preferences by punching the keypad on their phone, rather than telling them to an operator.

In an effort to reduce the coverage bias of landline only RDD, we created a dual landline/cell phone RDD sampling frame for this research. As a result, we are able to reach those with a landline and cell phone, as well as cell phone only households and landline only households. This dual frame yields a near perfect unweighted distribution on age group and gender, something almost never seen with traditional landline RDD sample or interviewer-administered surveys.

The field dates for this survey are April 25-27, 2011. In total, a random sample of 2,910 Canadians aged 18 and over responded to the survey (including a sub-sample of 2,672 decided voters). The margin of error associated with the total sample is +/-1.8 percentage points, 19 times out of 20.

Please note that the margin of error increases when the results are sub-divided (i.e., error margins for sub-groups such as region, sex, age, education). All the data have been statistically weighted to ensure the samples composition reflects that of the actual population of Canada according to Census data.
