IT IS NECK AND NECK AS WE HEAD INTO ELECTION YEAR

[Ottawa – December 15, 2014] Yet another new normal has set into the Canadian political landscape as we head into an election year. Some unexpected events have altered the last normal which saw the rejuvenated Liberal Party – led by Justin Trudeau – clearly in the driver’s seat and on the cusp of what would likely have been a majority government (had those numbers persisted to Election Day). A renewed security focus and other events following the shootings in Ottawa have produced a virtual deadlock between the Liberals and the Conservatives.

Through a combination of propitious events and sound political game, Stephen Harper sees himself having gone from the real possibility of an unenviable descent from majority Prime Minister to leader of the third party, to now being in position to aspire to a fourth government. Not only has he wiped out virtually all of Mr. Trudeau’s double digit lead, he has raised his approval numbers and there is much less unanimity that the country is heading in the wrong direction.

Does this suggest that he will be victorious in the fall (or perhaps earlier)? Not yet. In fact, it may be the case that a divided electorate doesn’t see any conventional political solution to being caught between a government from the right which is increasingly out of touch with the values and attitudes of Canadians¹ and a fragmented centre-left split over four parties. The structural factors of a progressive wave, a dark outlook for a shrinking and pessimistic middle class, and deep mistrust in democracy and public institutions have not gone away. In fact, those forces continue to percolate and it is quite likely that the combination of a rare public opinion hit on the ISIS mission, the deft handling of the shooting incident, and the newly elevated security concerns of the public will fade and leave the more challenging structural forces once again as a formidable barrier to another Harper victory.

HIGHLIGHTS

- **Federal vote intention:**
 - **31.8% Liberal Party**
 - **30.8% Conservative Party**
 - **20.0% NDP**
 - **7.8% Green Party**
 - **5.0% Bloc Québécois**
 - **4.6% Other**
- **Direction of country:**
 - **46% Right direction**

¹ Frank Graves, “Rethinking the Public Interest: Evolving Trends in Values and Attitudes”, Presentation to the #Can2020 Conference, Ottawa ON, October 2, 2014. Available online at: <http://goo.gl/i2b0PR>

There is evidence that a public weary of a hard right government fashioned from the unusual political dynamics of a fractured centre-left and a united right are willing to consider a new solution. The spectre of a coalition government was used effectively to strengthen – not weaken – Harper’s fortunes in 2011. But things appear to have changed. While in 2011 there was a sharp division as to whether a coalition would be preferable to a Conservative minority, the ground has shifted. By a very large margin, the public now favour a Justin-Trudeau-led coalition. This is very different from the split views of 2011. The parties will all insist that they are running to win and that this is a bad idea. But for Canadian voters, this may slowly be emerging as a possible solution to better match the next parliament to the majority values and interests of all Canadians.

This may be terra incognita for Canadian federal politics, but it is old hand in Europe and elsewhere. The diverse values and interests of an increasingly pluralistic citizenry aren’t fitting readily into the older party systems and this may well be a perfectly acceptable destination for the public. This may also be a temporary expression of frustration with a newly deadlocked race between the Liberals and Conservatives. Centre-left voters may be more willing to consider a coalition when confronting the real possibility of another Conservative government. We suspect that if the things were back where they were in the fall (with the Liberals in a clear lead), the appetite for this compromise would be lower.

Federal vote intention

Q. If a federal election were held tomorrow, which party would you vote for?

National Results

Likely voters*

2011 Election Results

Note: The data on federal vote intention are based on decided and leaning voters only.

* Respondents were asked to rate their likelihood of voting in the next federal election on a 7-point scale where 1 represents 0%, 7 represents 100%, and the midpoint, 4, represents 50%. 'Likely voters' are those respondents who selected 100%.

Demographic Patterns Revealing

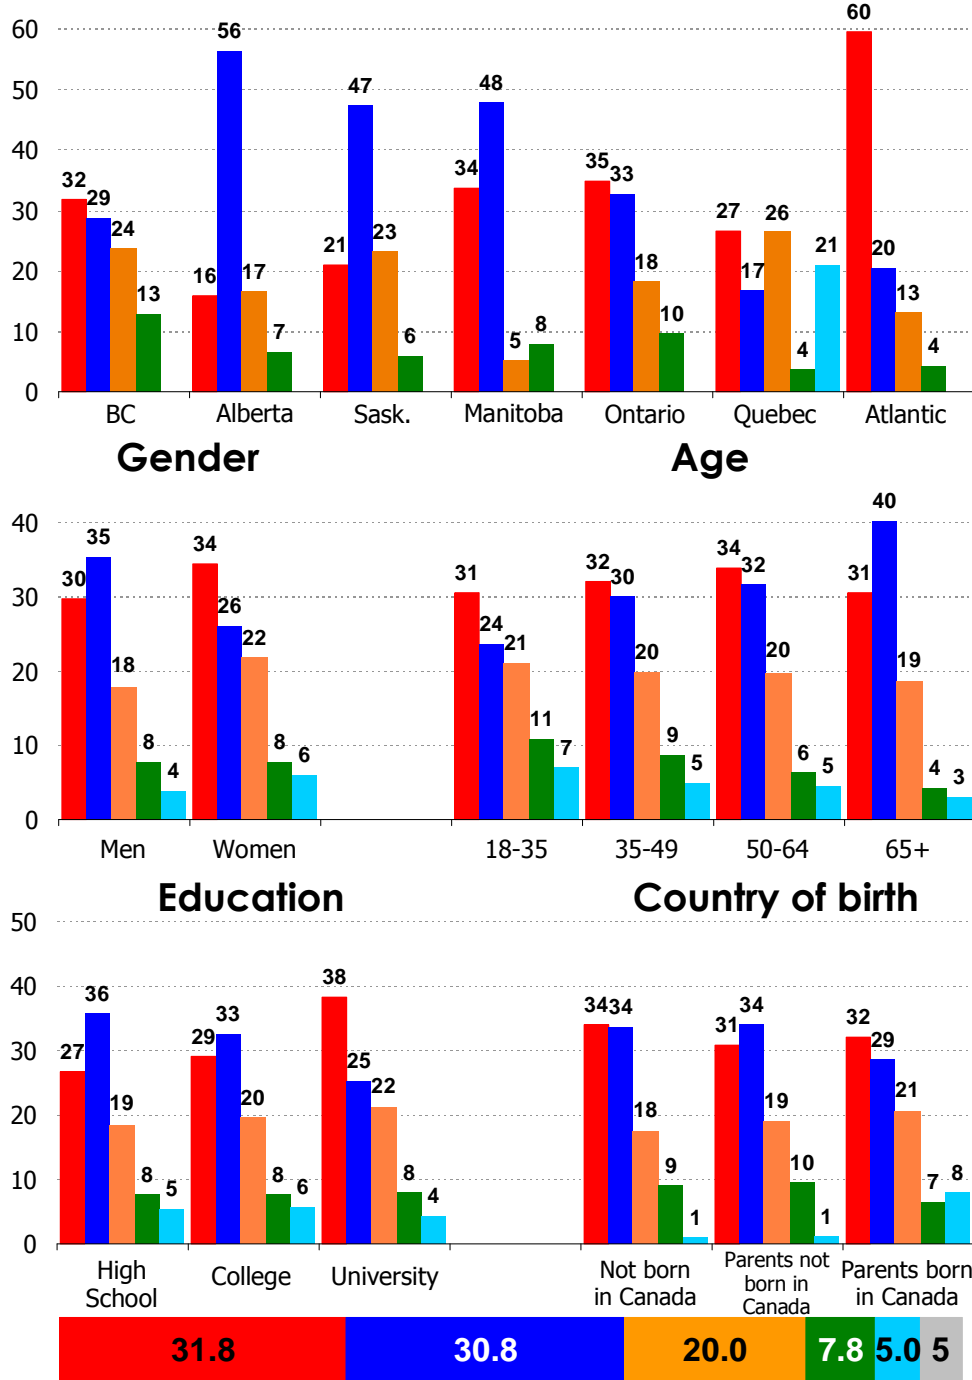

Stephen Harper appears to be re-assembling the same constituency that gave him his majority mandate in 2011. Older voters are gradually returning to the fray, and he has re-captured his strong lead with men. He is also gaining ground with new Canadians, an area that he had previously forfeited to the Liberals.

The Liberals, in contrast, have a large and troubling gap with males. However, this softness with men is not new; rather, it is a sustained pattern that has grown over the past two months. It appears that Mr. Harper's renewed focus on security has at least temporarily reinforced his connection with males. If the Liberals are to be successful, they must find a way to strengthen their standing with men.

Regionally, the Liberals are the most "pan-Canadian" party, as they hold at least some support in nearly every region of the country. They are also highly competitive in Manitoba, which was clearly not the case in 2011. The Conservatives are heavily focussed in Alberta and Saskatchewan, although they are nipping at the Liberals' heels in Ontario, which will be key to any election victory in 2015. The NDP continues to do well in Quebec.

Approval Numbers Uncover Hidden Strengths for Trudeau/Mulcair

Despite a relative deadlock in vote attention, there is good news to be found for Justin Trudeau in his approval figures. He leads in terms of approval and, interestingly, he does extremely well with undecided voters. Thomas Mulcair, meanwhile, is best able to transcend partisan lines and he does fairly well outside of NDP supporters. Stephen Harper remains in a distant third place; however, he has enjoyed a noticeable uptick in approval over the past few months.

Likelihood of Voting Raises New Possibilities

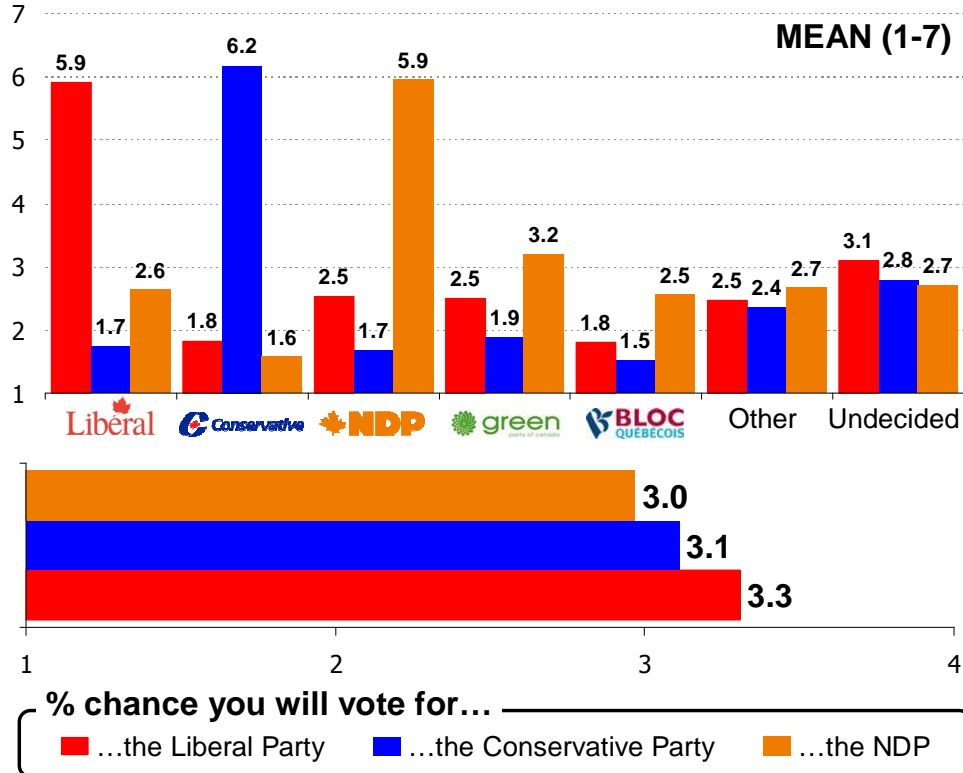

In our latest poll, in addition to our conventional ballot question (“which party would you vote for?”), we asked respondents to rate the likelihood that they would vote for each of the three main parties on a 7-point scale, where 1 indicates a 0 per cent chance of voting for the party in question, 7 indicates a 100 per cent chance, and the midpoint, 4, indicates a 50/50 chance. The results are revealing and somewhat different than what we see with the conventional ballot question.

The Liberals appear to have a slight – but statically significant – edge in this area, as Canadians of all political colours express somewhat more openness to voting Liberal. Conservative supporters have taken more of a “my way or the highway” stance and are widely closed off to voting either Liberal or NDP. Conversely, other party supporters have widely ruled out voting Conservative.

Liberal and NDP supporters, meanwhile, have expressed a tepid willingness to consider each other, suggesting that a Liberal-NDP coalition may be feasible should the Conservatives pull off a minority win in 2015. Indeed, unlike in 2011, it appears now that Liberals and NDP supporters are equally likely to say they are certain voters. The rise of greater commitment to vote in the centre-left is also coupled with a sharp rise in support for a Liberal-led coalition. These two changed forces suggest a formidable obstacle to a fourth Harper Government.

Likelihood of voting for three main parties

Q. What is the per cent chance that you will vote for ... in the next federal election?

Copyright 2014

BASE: Canadians; December 4-12, 2014 (n=3,276), MOE +/- 1.7%, 19 times out of 20

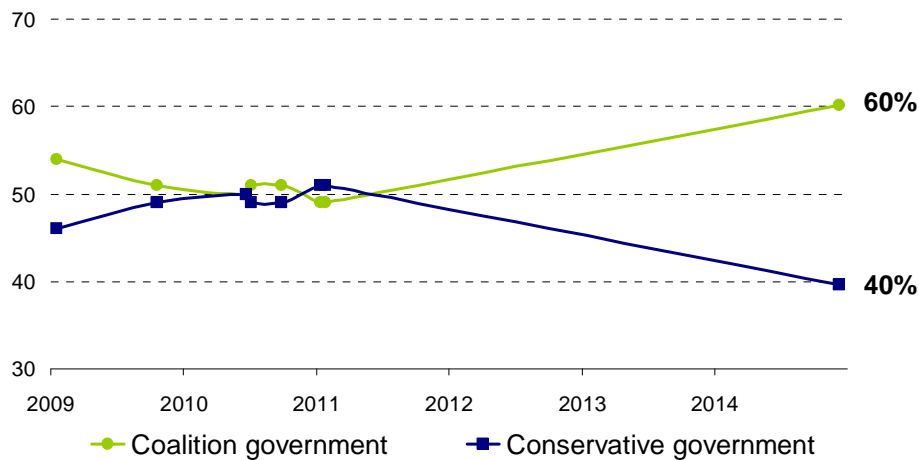

Canadians prefer Liberal-NDP coalition to Conservative government

Finally, we asked Canadians the simple question of whether they would prefer a Conservative minority government or a Liberal-led coalition with the NDP. Canadians express a striking preference for the latter, with 54 per cent (60 per cent when we exclude invalid responses) choosing the coalition. This represents a distinct movement away from the days of Michael Ignatieff, when Canadians were evenly split on this issue.

However, caution is necessary in interpreting these results. This is a fairly crude test and doesn't exhaust the possible arrangements. It also is one that may be more attractive when the Conservatives are doing relatively better. Indeed, given that 52 per cent of Canadians would vote either Liberal or NDP if an election were held today, it is not at all surprising that a similar proportion would opt for a form of government that offered their party of choice at least some level of power. So it should be taken as an interesting but very partial view on the future.

Support for coalition government

Q. If you were forced to choose between a Conservative minority government led by Stephen Harper and a coalition government made of up Liberals and New Democrats and led by Liberal leader Justin Trudeau*, which would you prefer?

Note: Figures adjusted to exclude those who did not provide a valid response.

* Prior to the 2011 federal election, respondents were asked about a coalition government led by then-Liberal leader Michael Ignatieff.

Conclusions

All in all, this is a pretty good poll for Stephen Harper and he is in a much better position that he has been for a long time. He is within striking distance of the lead for the first time in over a year and his approval rating has been slowly improving.

However, this is not a bad poll for Mr. Trudeau. Indeed, the Liberal Party still leads and we have not seen them behind in a poll in over a year. While the Conservatives are doing well, they may simply not do well enough. Mr. Harper has benefitted from a number of recent events that all occurred in a very short period of time and these figures may be as good as it gets as attention returns to the less welcoming forces which had put Mr. Harper in such a poor position throughout most of 2014. Furthermore, the rise in committed voters within the centre-left and the rise in support for a Trudeau-led coalition both suggest more formidable obstacles to a fourth successive government.

Finally, while the overall result as a deadlock is very significant, it is based on rather modest changes. The Conservatives have not surged and the Liberals and NDP have not plummeted. Rather, we have seen a modest, downward shift for the Liberals and NDP, accompanied by a modest uptick for the Conservatives.

In any case, we are still ten months out from an election (discounting, of course, the rumoured early election call). It is extremely early and all of this could change.

Methodology:

This study was conducted using High Definition Interactive Voice Response (HD-IVR™) technology, which allows respondents to enter their preferences by punching the keypad on their phone, rather than telling them to an operator. In an effort to reduce the coverage bias of landline only RDD, we created a dual landline/cell phone RDD sampling frame for this research. As a result, we are able to reach those with a landline and cell phone, as well as cell phone only households and landline only households.

The field dates for this survey are December 4-12, 2014. In total, a random sample of 3,276 Canadian adults aged 18 and over responded to the survey. The margin of error associated with the total sample is +/-1.7 percentage points, 19 times out of 20.

Please note that the margin of error increases when the results are sub-divided (i.e., error margins for sub-groups such as region, sex, age, education). All the data have been statistically weighted by **age, gender, region, and educational attainment** to ensure the sample's composition reflects that of the actual population of Canada according to Census data.
