

## LOGJAM CONTINUES AS CANADIANS BECOME MORE RECEPTIVE TO INNOVATIVE POLITICAL APPROACHES

[Ottawa – May 29, 2015] The NDP has fallen back slightly and the Liberals have risen slightly; all of these changes are of little (if any) statistical significance, but the net result is to confirm a new normal of a three-way race. What is most striking about this new normal is the frankly tepid level of enthusiasm for any of the above. The NDP are the clear movers and beneficiaries of the changes over the past few months, but they are still sub-thirty and slightly below their 2011 result. The Liberals are up significantly from 2011, but have fallen back from a clear lead last fall and are now stuck pretty listlessly floating in the 27-30 point range. The Conservatives find them similarly locked into a pattern of oscillating around or under the 30-point barrier, well short of the near forty-point result of 2011.

### Federal vote intention

Q. If a federal election were held tomorrow, which party would you vote for?

#### National Results

#### 2011 Election Results

As this pattern solidifies, there are signs that voters are increasingly receptive to some “new” approaches. For most voters, the problem to be solved is how to change a government which has ruled for nearly a decade with most voters unsupportive. Only 36 per cent of voters disagree that it is time for Stephen Harper to exit (stage right, of course). Yet the frustration of a fragmentation of the center left may be producing new receptivity to things that were not acceptable in 2011. As it becomes increasingly clear that no party is poised to form a majority and that most want a change, we see support for both coalition governments and strategic voting on the rise. In fact, these may be emerging as the best tools to serve the frustrated interest and values of the majority of the electorate.

Let’s review some of the critical ingredients of this major shift in outlook on these approaches. First, the apparent preference for reconstructing a centrist option appears to have faded and we now have two center left parties who tend to be relatively equally poised. There is a still lot of capacity for further change. The newfound strength of the NDP reflects a major recapture of the labour vote and the university educated vote. Many of those voters are more upset with the current government and the prospect of four more years of another Harper government than they are attracted to the appeal of either the NDP or the Liberals. Moreover, we don’t see much evidence that either party is poised for a pratfall.

## Tracking support for coalition government

Q. If you were forced to choose between a Conservative minority government led by Stephen Harper and a coalition government made up of Liberals and New Democrats and led by Liberal leader Justin Trudeau\*, which would you prefer?

Note: Figures adjusted to exclude those who did not provide a valid response.

\*Prior to the 2011 federal election, respondents were asked about a coalition government led by then-Liberal leader Michael Ignatieff.

BASE: Canadians (half-sample); May 20-26, 2015 (n=1,270), MOE +/- 2.8%, 19 times out of 20

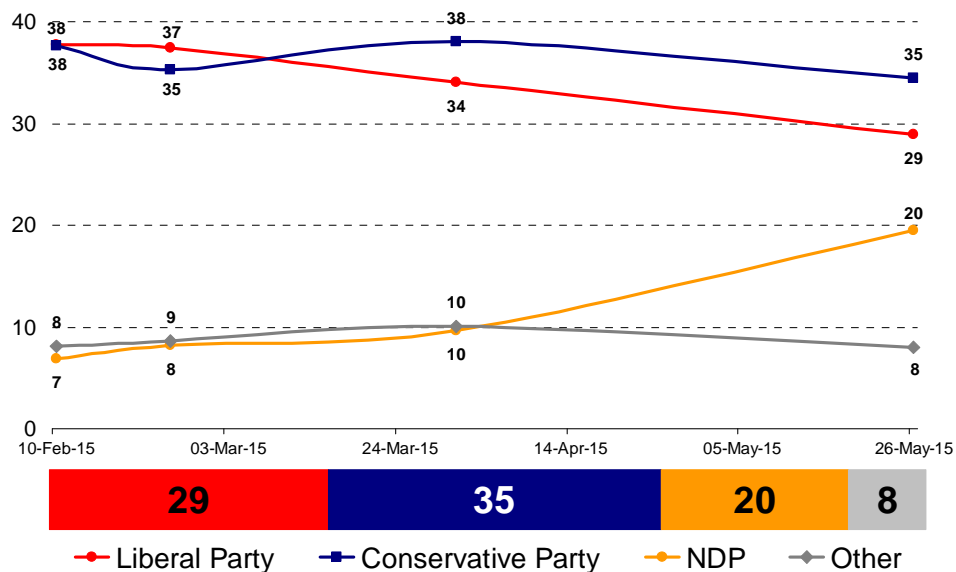

The exhibit above shows that the strong aversion to a coalition government, which may have been critical to Mr. Harper’s late drive to a surprising majority, has morphed dramatically. In the lead up to 2011, voters were even divided between a Harper minority or a coalition. Fast forward

to the frustrated voter landscape of 2015 and we see a profoundly different picture. By a margin of almost two-to-one, the voters of today would send Mr. Harper packing and prefer a coalition. Indeed, it may be time to rethink the scary ads about the spectre of reckless coalition and the need for a strong, stable Conservative government. Canadians have had four years of that and are showing obvious skepticism about the results of that choice.

As the NDP have risen back to the levels of support they had in 2011, this has produced new questions about who would lead a coalition government. Couple this with the fact that the prospects of either a Liberal or NDP government remain live options. While a slim plurality think the Conservatives will win, almost as many see a Liberal victory and now the prospect of a previously unthinkable NDP victory has squarely entered the realm of plausibility for voters.

## Tracking predicted election outcome

Q. Regardless of your current choice, who do you think will win the next election?

BASE: Canadians; May 20-26, 2015 (n=2,518), MOE +/- 2.0%, 19 times out of 20

## Election prediction: minority vs. majority

Q. And do you think this will be a minority or a majority government?

Copyright 2015  
No reproduction without permission

BASE: Canadians; May 20-26, 2015 (n=1,292), MOE +/- 2.1%, 19 times out of 20

So we now have a political outlook that is as clear as mud for voters. They have no real idea who is going to win and they don't think any winner is likely to achieve a majority. The sharp rise in support for a coalition is one interesting response to this political dilemma. Another would be the use of strategic voting to more efficiently fashion a non-Conservative government of some sort.

## Trudeau-led coalition has clearest advantage over four more years of Harper

As Thomas Mulcair's NDP is the only party with wind in their sails, it is now important to see how the public would view the option of either a Trudeau-led or Mulcair-led coalition. Here we encounter an interesting finding which may serve as a source of uplift to a pretty listless voter outlook on Justin Trudeau's Liberal Party.

### Support for coalition government

*Q. If you were forced to choose between a Conservative minority government led by Stephen Harper and a coalition government made up of Liberals and New Democrats/New Democrats and Liberals and led by Liberal leader Justin Trudeau/NDP leader Thomas Mulcair, which would you prefer?*

Copyright 2015  
No reproduction without permission **BASE:** Canadians (half-sample each); May 20-26, 2015 (n=1,270/1,248), MOE +/- 2.8%, 19 times out of 20

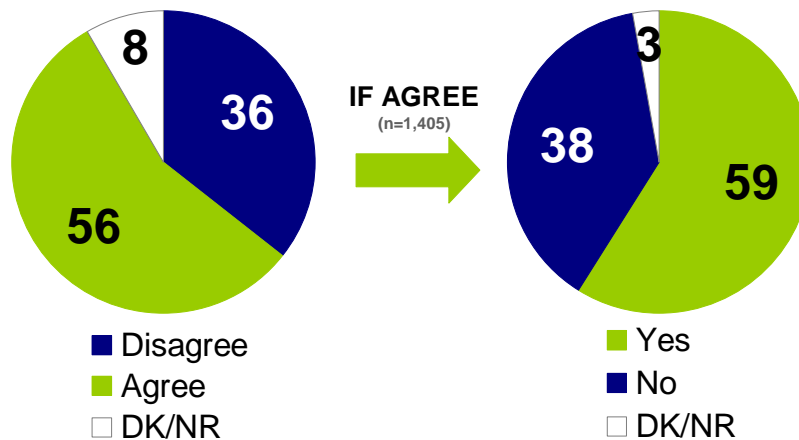

While Canadians express a clear preference for a coalition led by either Mr. Trudeau or Mr. Mulcair over four more years of Stephen Harper, it is Justin Trudeau who has a clearer advantage over Mr. Harper on this choice. His 56/35 advantage is nearly double the 51/39 advantage that Mr. Mulcair enjoys. Given the obvious momentum advantage for the NDP, this is a mildly curious and possibly important finding. Perhaps the public prefer to tilt to the center in anchoring any future progressive coalition? Or perhaps they simply haven't caught up with the new position of the NDP. This will bear careful watching.

Some of these same forces are at play in looking at strategic voting.

## Openness to strategic voting

Q. Do you disagree or agree with the following statement: I feel that Stephen Harper and the Conservatives are not the best choice and it is time for a new government in Ottawa.

Q. [IF AGREE] If your first choice did not have the best chance of beating the Conservative candidate in your riding, would you consider voting for the choice that had the best chance of defeating the Conservative candidate?

Copyright 2015

BASE: Canadians; May 20-26, 2015 (n=2,518), MOE +/- 2.0%, 19 times out of 20

## Tracking openness to strategic voting

Q. [IF AGREE] If your first choice did not have the best chance of beating the Conservative candidate in your riding, would you consider voting for the choice that had the best chance of defeating the Conservative candidate?

Copyright 2015  
No reproduction without permission

BASE: Those who want new government; May 20-26, 2015 (n=1,405), MOE +/- 2.6%, 19 times out of 20

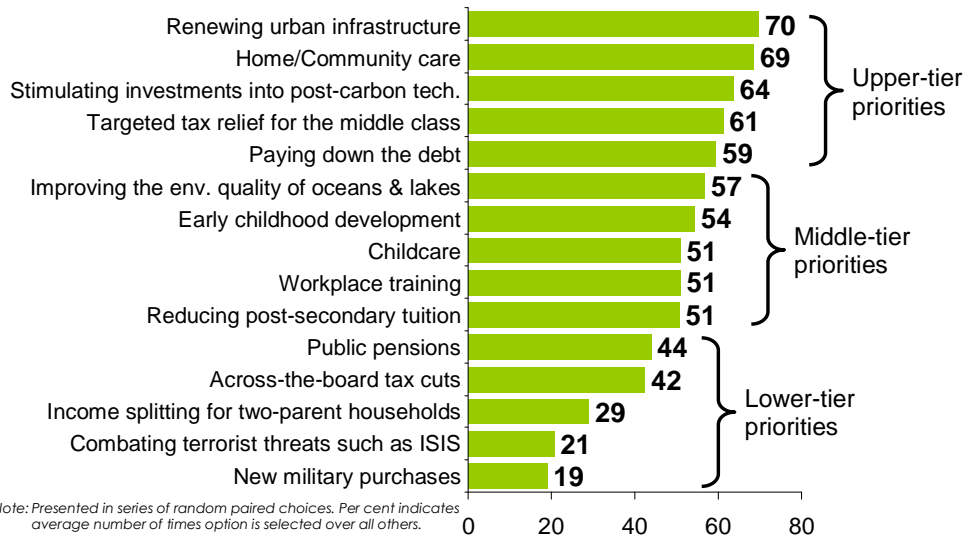

We can see that there is rising support for strategic voting and among the majority of Canadians who want to retire Mr. Harper, most of them would hold their nose and vote for the most plausible progressive option to defeat a Conservative candidate. While this attitude has not had that much efficacy in shaping electoral outcomes in the past, the support is now stronger and the technology and resources are in place to actually guide strategic voting in the next election. If the numbers remain this tightly bunched, we would fully expect strategic voting to be applied and most likely with some success in the fall election.

### Hard trade-off analysis yields interesting results

Last week, we conducted what is called a trade-off analysis of how to spend one billion dollars over the next ten years. Respondents were presented with pairs of choices (from a list of 15 items) and, rather than ask them to assign some arbitrary rating for each one, we asked them to choose between the two. In a world where wants are infinite but resources are limited, forced choice exercises are an excellent option for disciplining these choices, as it forces respondents to order their preferences, thereby creating an overall hierarchy and providing a highly accurate picture of the hard choices that Canadians would make.

## Preferred areas of investment

*Q. Suppose you were Prime Minister for a day and you had to choose how to invest one billion dollars over the next 10 years. Which of the following investments would be in the best interest of the public?*

Copyright 2015  
Confidential. Not for circulation.

BASE: Canadians (online only); May 12-19, 2015 (n=2,116), MOE +/- 2.1%, 19 times out of 20

The figures in the chart above represent how often each item was selected over the other items tested. A score of over 50 indicates that the option was selected over other options the majority

---

of the time and is therefore a relative “winner”. Conversely, a score of under 50 suggests a relative “loser”. Each respondent was presented with three pairs, for a total of 8,802 responses.

Most notably, urban infrastructure and home care dominate the list, followed closely by investing in a post-carbon economy and targeted tax relief for the middle class. The relative strength of paying down the debt is unusual (fiscal issues typically rank quite low on Canadians’ list of priorities<sup>1</sup>), but this could be a reflection of skepticism regarding the government’s ability to get things done. What is perhaps most interesting is the stark difference between the vision that the government is presenting to Canadians and what it is that Canadians actually want. Indeed, many of the key pillars of the current government’s platform – tax cuts, income splitting, combating terrorist threats, and new military purchases – all find themselves at the bottom of this list.

## Methodology:

This report draws on data from two separate surveys. The first survey was conducted using High Definition Interactive Voice Response (HD-IVR™) technology, which allows respondents to enter their preferences by punching the keypad on their phone, rather than telling them to an operator. In an effort to reduce the coverage bias of landline only RDD, we created a dual landline/cell phone RDD sampling frame for this research. As a result, we are able to reach those with a landline and cell phone, as well as cell phone only households and landline only households.

The field dates for the first survey are May 20-26 2015. In total, a random sample of 2,934 Canadian adults aged 18 and over responded to the survey. The margin of error associated with the total sample is +/-1.8 percentage points, 19 times out of 20.

The second survey was conducted using EKOS' unique, hybrid online/telephone research panel, Probit. Our panel offers exhaustive coverage of the Canadian population (i.e., Internet, phone, cell phone), random recruitment (in other words, participants are recruited randomly, they do not opt themselves into our panel), and equal probability sampling. All respondents to our panel are recruited by telephone using random digit dialling and are confirmed by live interviewers. Unlike opt-in online panels, Probit supports margin of error estimates. We believe this to be the only probability-based online panel in Canada.

The second survey involved an online only sample of 2,116 Canadians. While panellists are randomly recruited, the survey itself excludes the roughly 1 in 8 Canadians without internet access. The results should therefore be considered generalizable to Canada's online population. The field dates for this survey are May 12-19, 2015. The margin of error associated with the total sample is +/-2.1 percentage points, 19 times out of 20.

Please note that the margin of error increases when the results are sub-divided (i.e., error margins for sub-groups such as region, sex, age, education). All the data have been statistically weighted by **age, gender, region, and educational attainment** to ensure the sample's composition reflects that of the actual population of Canada according to Census data.
